ADAS

- ✓ Monitors the road and driving environment
- ✓ Helps avoid accidents by detecting hazards.
- ✓ Lane departure warnings, forward collision alerts, and fatigue detection
- ✓ Enhances overall driving safety by providing real-time alerts about road conditions

FAQ

Frequent Questions

- **Does the terminal support 4G or 5G network? Can It uses in our country?**

Yes, we offer terminals equipped with Qualcomm chips that support 5G communication. Additionally, our 4G communication chips are globally compatible and can be used in any country.

- **Can the terminal have a custom laser logo? Can the startup screen be customized? Can the launcher be changed?**

Yes, all of these customizations are easy for our technicians. Just send us your design, and we will make sure to deliver the results you want.

- **Does the terminal have NFC functionality?**

Our taximeters are not designed with space for NFC modules to maintain high product quality and offer competitive prices. However, we understand the importance of NFC for payment and driver identification, so we can provide NFC readers as an alternative solution.

- **How does your taximeter handle payments?**

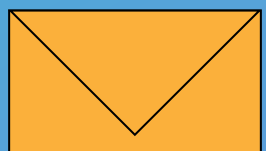

Our taximeters support digital payments, including credit/debit card readers and mobile payment platforms, making transactions easy for passengers and ensuring prompt payments for drivers, without the need for cash handling

- **How do your taximeters maintain transparency in pricing?**

Our taximeters clearly display fare calculations on the screen throughout the journey, ensuring passengers are always aware of the cost. This transparency helps resolve any disputes quickly, as the taximeter provides an accurate record of the fare.
